The AMC-MECANOCAUCHO® type Elastomeric Spring antivibration mounts are ideal for those applications where high vibration isolation is required. Its specific design allows this mount to have high deflection. This feature is particularly useful on those applications where vibration in the vertical sense is predominant.

TECHNICAL CHARACTERISTICS

The damping properties of the rubber allow to provide a higher motion control of the suspended element. The optimal corrosion properties allow this mount to resist to aggressive corrosion environments.

APPLICATIONS

The AMC-MECANOCAUCHO® Elastomeric Spring antivibration mounts are used in applications where a high degree of isolation is required and also motion control of the suspended element is required, such as: vibrating tables, vibration feeders or suspension of industrial vehicles.
